What is what?

dispatch(action)   (previousState, action)

Action Creators   Store   Reducers
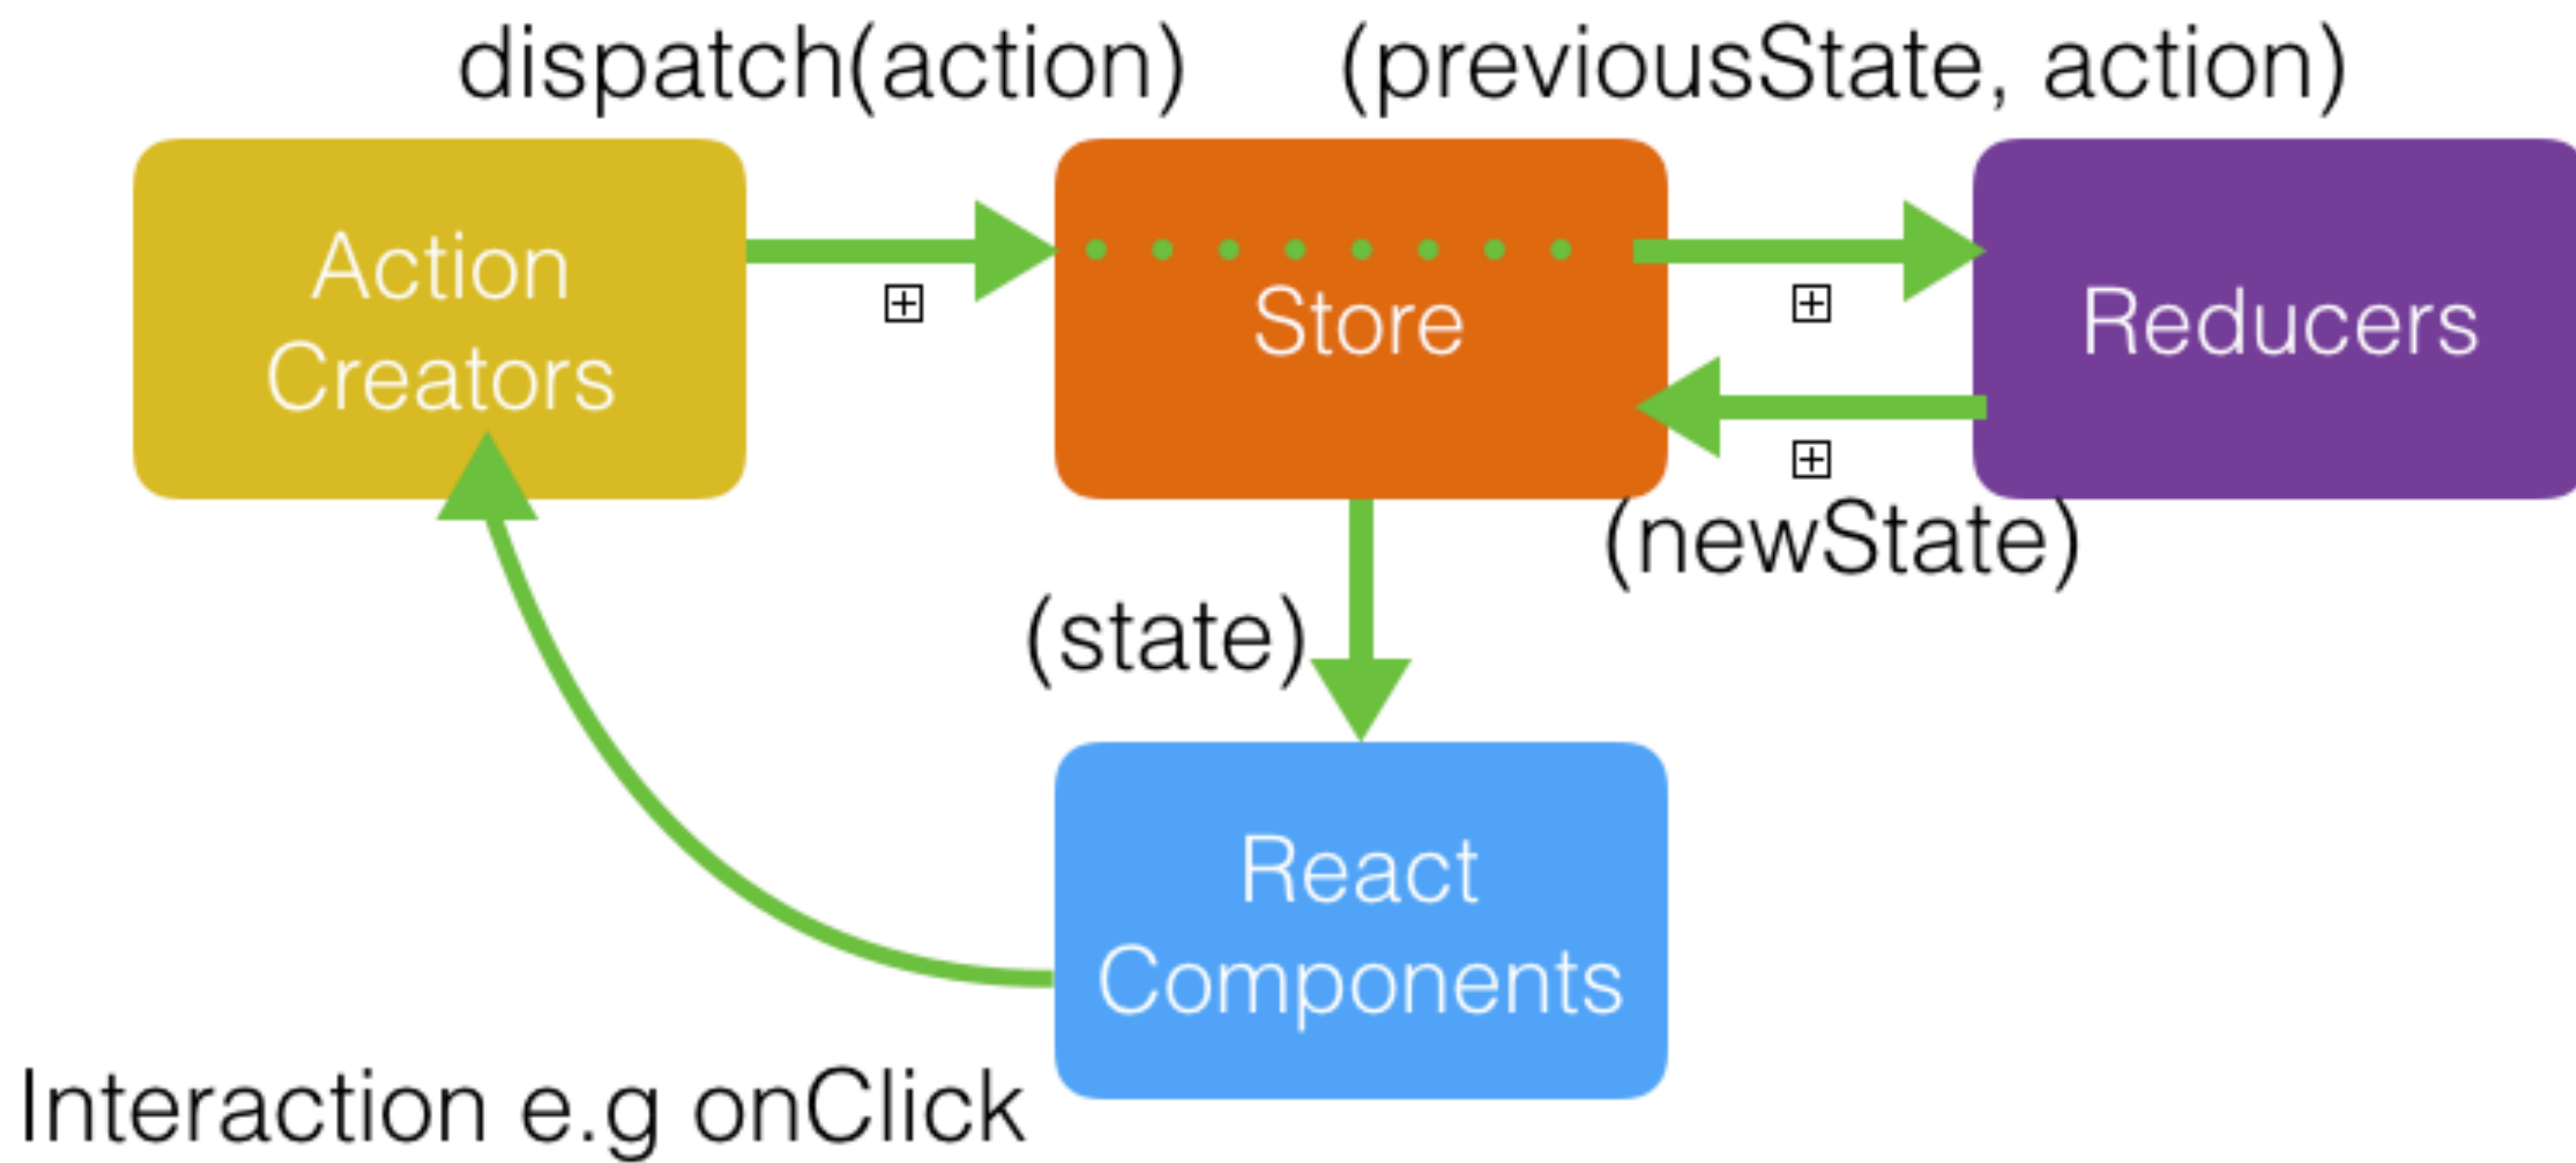

(state)

(newState)

React Components

Interaction e.g onClick

React–Redux

connect – higher order component injecting the state & dispatch from the store. Use connect(mapStateToProps, mapDispatchToProps)
 – mapStateToProps – first argument for connect
 – mapDispatchToProps – mapping dispatch + action creators to functions

Provider – component to inject the store

Redux

combineReducers – helper function turns an object whose values are different reducing functions into a single reducing function

createStore – creates a Redux store that holds the complete state tree of your app
